2021 Fall Insurance Update

Grain Bins - CARRYOVER GRAIN

- If you still have any 2020 grain in your bins, **do NOT put 2021 crop in BEFORE you have an insurance adjuster measure => Contact us ASAP** and we will get a measurement scheduled.

SILAGE, Grain fed to livestock, Ag Bags, High Moisture Corn

- If you are going to have:
 - Corn chopped for silage
 - Corn fed to livestock
 - Grain stored in ag bags
 - High moisture corn going to a bunker or a high moisture bin
- **Please contact us ASAP**, more than likely we will want to **get an adjuster out to do an appraisal BEFORE you harvest.**

WHEAT

- **September 30th, 2021** is the **last day** to add or change your MPC1 wheat coverage for your wheat planted this fall (*2022 crop year*). **Oct. 15th** is the **final plant date** for wheat.
 - Please contact us if you would like to add or review your coverage.

2021 CORN & SOYBEAN HARVEST

- If there is a **PRICE INCREASE**, under MPC1 revenue protection, the **yield GUARANTEE** stays the same, but if your **yield falls below** your guarantee you get paid the **HIGHER harvest price for each bushel lost.**

Crop	Spring Price	Harvest Price	Price Change	Futures Contract
Corn	\$4.58	\$5.10*	11.3% INCREASE*	December Corn
Soybeans	\$11.87	\$12.77*	7.6% INCREASE*	November Soybeans
<i>Discovery Period</i>	<i>February</i>	<i>October</i>		

*Harvest Prices is an **EXAMPLE** using current futures as of 9-7-21, **NOT FINALIZED**

● **LOSS UNITS & Production Records**

- **If delivered to a commercial facility**, we will need to get a copy of your **load summary sheets**, not just individual tickets.
- If stored in your **grain bins**:
 - Record which fields are stored in each bin
 - **If you place more than one field (unit) in a single bin, make sure you have an acceptable load log by field (unit) -OR-** place a mark on the side of the bin before adding grain from the next field
- **LOAD LOGS** - an acceptable load log could be:
 - **Printed scale tickets** or notebook log of a **grain cart or farm scale**.
 - A grain cart equipped with a **Bluetooth Libra or iForeman** system.
 - **Precision harvest yield maps** from your combine monitor.
- **Give us a call** if you have questions about **acceptable records** or **if you want help figuring out a method that works BEST for YOUR operation**.

REPORTING PRODUCTION

The **best time** to report your production is **as soon as you finish harvesting** - while it is still fresh in your mind.

With **December 10th** being the last day to file a claim for the 2021 crop, we would like to get your production reported by then so we can check for losses & file a claim if needed. **We will check all of your yields for losses so you don't miss out on a potential payment.**

ONCE you have your PRODUCTION RECORDS ready, PLEASE LET US KNOW so we can help you get your crop insurance production report filled out.

If possible, **we would like to get a copy of your PRODUCTION RECORDS:**

- elevator summary sheets, bluetooth grain cart records, bin measurements, etc.

If you would like your **GRAIN BINS MEASURED**, please contact our office as soon as you are finished with harvest.

If you would like to use your **PRECISION** harvest **YIELD MAPS** to report your production, give Jason a call if you have any questions.

**** NEED to CALIBRATE harvest monitor to within 3% of a scale weight & RECORD it ****

Thank you for your business & have a safe harvest!
